

WorkflowManagerConfigSample

This sample allows users to only interact with the Workflow Pane in ArcGIS Pro, and hides the Workflow View, the Job view and the Workflow ribbon on map from the user. This configuration allows organizations to deploy a slimmed down version of Workflow Manager for ArcGIS Pro that focusses on work completion. Users see only their jobs or jobs in their groups, and is for users who don't have the requirement to edit job properties, search for jobs and see a workflow diagram. This creates a simpler UI

How to use the sample

1. User must have a Workflow manager database set up and accessible
 - 1.a. Please refer to setting up a Workflow manager database before using this sample.
 - 2.a Configurations are built using the new configuration project template provided in the Pro SDK template in Visual Studio. Once selected, the configuration template creates the necessary project components which developers can use.
Please refer to ArcGIS Pro SDK Configurations for more information
Or
 - 2.a Install the configuration 'WorkflowManagerConfigSample.proconfigx'
 - 2.b The sample config can be deployed using the following command line
example: C:[file location]\ArcGISPro.exe /config:[name of config]
3. The ArcGIS Pro Project must have a valid Workflow Manager database connection prior to using
 - 3.a. To establish a valid Workflow Manager database connection just use the 'Add Workflow Connection' option under the connections menu on the project tab. Save the project and re-open it again to view all open jobs assigned to the current user or their groups. Users can then execute and finish jobs using only the workflow pane.
